

Cognitive Pattern Explorer

Day 36 — Interactive Self-Reflection Experience

Project Overview

Cognitive Pattern Explorer is a psychology-inspired educational self-reflection experience. It helps users notice thinking tendencies through everyday scenarios, priority choices, draggable timelines and a final reflection journal. It is not a diagnostic or clinical assessment.

Technology

Component	Implementation
Frontend	Single-file offline HTML
Languages	HTML, CSS and vanilla JavaScript
Frameworks	None
APIs / Backend / Database	None
External assets	None
Interaction	Native drag-and-drop with touch fallback
Accessibility	Keyboard support, visible focus and reduced-motion support
Offline use	Open the HTML file directly in a browser

User Flow

Stage	Experience
Start Screen	Choose Calm Mode or Busy Mode and begin.
Chapter 1	Explore five everyday scenarios and choose the response that feels most natural.
Chapter 2	Drag priority cards into a personal order.
Chapter 3	Map thought cards across before, during and after a decision.
Final Reflection	Review personalized insights, percentage breakdown and journal.
Replay	Reset the exploration and begin a new path.

Thinking Tendencies

Tendency	Reflective interpretation
Analytical Thinker	Often leans toward evidence, structure, comparison and details before acting.
Emotional Intuitive	Often notices feelings, human impact and emotional signals.
Overthinking Loop Style	Often explores possibilities, risks and outcomes before committing.
Action-First Decision Maker	Often prefers experimentation, practical steps and learning by doing.
Balanced Reflective Thinker	Often combines evidence, feelings, action and reflection.

Chapter Details

Chapter 1 — Discover Your Thinking Style: Five fictional everyday situations explore evidence-based, emotional, reflective, action-oriented and balanced responses.

Chapter 2 — Choose Your Priorities: Users arrange cards such as understanding facts, considering people, exploring outcomes, taking the next step and integrating perspectives.

Chapter 3 — Map Your Thinking: Thought cards such as Notice, Question, Possibilities, Experiment and Reflect are placed into a before/during/after timeline.

Final Reflection Journal: The application presents the strongest observed tendency, a secondary clue, a percentage breakdown and a free-form reflection journal.

Design & Accessibility

The interface uses a calm dark aesthetic, soft green/blue accents, rounded cards, ambient animation, smooth transitions, progress indicators and responsive layouts. Keyboard interaction, focus states, touch fallback and reduced-motion support are included.

Educational Safety

Percentages describe choices made during this activity only. They are not clinical scores, diagnoses or permanent personality labels. The experience encourages curiosity and self-observation rather than judgment.

Replay & Offline Behavior

All scenarios and logic are stored inside the HTML file. No internet connection, API, database, framework or external asset is required. Replay clears the current session and creates a fresh interaction path.
