

Day 11 — ATS Resume Optimizer

Job-Description-Matched Resume Optimization with Claude

 **ATS Score: 58/100**

 **Gap Analysis**

 **Optimized Resume**

ATS Match Score

Note on JD used: No specific job posting was available at the time of this analysis, so a **representative Entry-Level Data Analyst JD** was used — compiled from common patterns seen in typical fresher Data Analyst postings (SQL, Excel, Python, Power BI/Tableau, statistics, stakeholder communication). This is not a live/real JD pull. Re-running this analysis against an actual job posting will produce a more accurate, personalized score.

ATS MATCH SCORE

58 / 100

Gap Analysis

Missing Keywords

- Tableau (only Power BI mentioned, still in progress)
- "Data visualization" (implied, not explicit)
- "Data cleaning" / "data wrangling"
- "Statistics" / "statistical analysis"
- "Stakeholder communication" / "presenting insights"
- NumPy (only Pandas — basic — listed)

Missing Skills

- No explicit statistical methods / hypothesis-testing exposure
- No Tableau or alternate visualization tool beyond Power BI
- No stated experience presenting findings to non-technical audiences

Improvement Opportunities

- Group Excel/SQL/Python/Power BI explicitly under a "Data Analysis & Visualization" skill bucket — matches exact JD phrase patterns
- Bring Anudip Foundation Data Analytics training higher/more prominent — closest direct match to this role
- Surface DBMS coursework in Skills, not just buried in coursework — relevant to "database knowledge"
- No project currently demonstrates full data analysis pipeline (clean → analyze → visualize) — adding one (if it exists) would meaningfully raise the score

SILKI CHAUHAN

Baghpat, Uttar Pradesh | 8445288298 | silkichauhan057@gmail.com | linkedin.com/in/silki-chauhan-7b4a55311 | github.com/silkichauhan057-web

PROFESSIONAL SUMMARY

Computer Science Engineering student (B.Tech, Third Year) gaining hands-on Data Analytics training in Excel, SQL, Python, and Power BI through Anudip Foundation. Strong foundation in Database Management Systems and Java-based software development, with practical project experience building database-integrated applications. Seeking to apply analytical and technical skills in a Data Analyst role.

SKILLS

Data Analysis & Visualization: Excel, SQL (MySQL), Python, Power BI (in progress), Pandas (basic)

Programming: Java, Python

Database: MySQL, JDBC (Java Database Connectivity), Database Management Systems

Core Coursework: DBMS, Operating Systems, Computer Networks, Software Engineering, Web Development, Machine Learning Fundamentals, Cybersecurity Basics

Tools & Platforms: GitHub, LeetCode

EXPERIENCE

Data Analytics Trainee (Offline Training) — Anudip Foundation

Ongoing

- Undergoing structured, hands-on training in Data Analytics covering Excel, SQL, Python, and Power BI
- Completed structured training in Java with emphasis on object-oriented programming concepts

PROJECTS

Hospital Management System — Java, SQL, JDBC

- Developed a hospital management system integrating Java with a MySQL database using JDBC connectivity, applying core database management concepts

Café Menu Management System — Frontend Development

- Built a frontend interface for managing a café's menu system

Memory Puzzle Game — Python

- Built an interactive memory puzzle game using Python, applying logic and control-flow fundamentals

EDUCATION

Bachelor of Technology, Computer Science Engineering — Dr. A.P.J. Abdul Kalam Technical University, Lucknow, UP | Third Year | CGPA: 7.62/10 (76.6%)

Senior Secondary (XII), UP Board — Shri Ram Inter College, Baghpat, UP | 2023 | 66% (7.0 CGPA)

Higher Secondary (X), UP Board — Shri Ram Inter College, Baghpat, UP | 2021 | 85% (9.0 CGPA)

CERTIFICATIONS

- Certification in Java Data Structures and Algorithms

ACHIEVEMENTS

- Maintained a cumulative CGPA of 7.5 through the 7th Semester of B.Tech
- Active participant in coding challenges and technical discussions on GitHub and LeetCode

📄 Process Screenshot (Mockup)

🟡🟢🔴 claude.ai — ATS Resume Optimizer

Prompt used: "ATS Resume Optimizer & Resume Generator — rewrite the resume for maximum ATS alignment and recruiter relevance while maintaining 100% factual accuracy..."

Input: Existing resume (uploaded) + representative Entry-Level Data Analyst JD (no real posting was available)

Output: ATS Match Score (58/100), Gap Analysis (missing keywords/skills/improvements), and fully restructured resume — zero fabricated content.

Note: Replace this mockup box with a real screenshot of your Claude conversation before uploading to GitHub.

💡 Key Learnings

- Without a real job description, an ATS score is only as good as the representative JD used — always disclose when a placeholder JD is used instead of a real posting.
- Strict "never invent" rules matter: several JD keywords (Tableau, NumPy, statistics) were deliberately **not** added since they weren't part of the actual background — a higher score isn't worth misrepresenting skills.
- Reorganizing existing content under JD-aligned headers (e.g. "Data Analysis & Visualization") can raise ATS relevance without adding a single fabricated skill.
- Surfacing relevant coursework (DBMS) that was previously buried is a free, honest way to close keyword gaps.
- Getting a real JD from LinkedIn/Naukri/Indeed next time will produce a far more actionable, role-specific gap analysis than a representative one.
