

DAY 33

Media Integrity Analyzer

Interactive media literacy worksheet • Companion to the offline HTML lesson

Goal: learn by observing, thinking, and then revealing the evidence. The scenarios below are fictional and designed to practice transferable media-literacy habits.

Color Theme

Selected theme: ■ Claude Orange ■ Editorial Blue ■ Signal Green ■ Insight Violet

Challenge 1 — Headline Detective

Concept: A headline should match the strength of the evidence. Words such as “prove” can turn an association into a claim of certainty.

Fictional headline: “Scientists Prove That Drinking Coffee Before 9 AM Makes You Live Longer”

Would you click? ■ Yes ■ Maybe ■ No

Which parts are misleading? ■ “Prove” ■ “Live longer” ■ Implied cause-and-effect ■ Nothing

Your observation:

Reveal — Evidence

The fictional study found an association with reported energy levels. It did not prove that coffee increases lifespan or causes better health.

Fair rewrite: “Morning Coffee Linked to Higher Reported Energy in Small Observational Study”

Key takeaway: Ask whether the evidence supports the strength of the claim.

Challenge 2 — Emotion Detector

Concept: Emotional language can influence attention and behaviour even when a claim is not proven false. Pause when a post creates a strong feeling and immediately asks you to act.

Fictional post: “Parents are being LIED TO about what their kids are eating. A new report has families terrified about everyday snacks. If you really care about your child's future, you need to know this before it's too late. Share this with every parent you know.”

How did it make you feel? ■ Curious ■ Worried ■ Angry ■ Excited ■ Neutral

Which words influenced that feeling?

Reveal — Pattern

Target audience: Parents and caregivers.

Intended response: Fear and urgency, followed by a sense of responsibility to share.

Technique: Fear + urgency + moral pressure.

Neutral rewrite: “A report discusses questions about ingredients in children's snacks. Read the evidence and compare it with reliable health information before drawing conclusions.”

Key takeaway: Emotion is a signal to pause, not proof that a claim is true.

Media Integrity Dashboard

Record your final observations.

Metric	Your score / observation
Headline Accuracy	_____
Source Reliability	_____
Emotional Manipulation	_____
Audience Targeting	_____
Overall Media Integrity Score	_____

What did you learn?

Biggest red flag:

Three practical habits:

1. _____
2. _____
3. _____

Memory shortcut: Stop → Source → Evidence → Emotion → Share.

The HTML file is the fully interactive offline experience. This PDF is the printable companion/worksheet.
