

Typing Speed Studio

Day 38 • Premium Reactive Typing Practice Application

Project Overview

A single-page, self-contained HTML application concept for a polished typing platform. The application is designed to feel like a commercial typing product rather than a basic typing test.

Typing Modes

Time Mode	15 / 30 / 60 / 120 seconds
Word Count Mode	25 / 50 / 100 / 250 words
Quote Mode	Quote-based practice
Programming Mode	HTML, CSS, JavaScript, Python, Java, C++, SQL and more
Custom Text Mode	User-provided practice text
Adaptive Mode	Difficulty changes according to performance
Focus Mode	Only the current line remains visible
Zen Mode	Distraction-free, untimed practice

Dynamic Content

Practice passages should be generated according to the selected category. Examples include realistic programming snippets for Programming Mode, professional communication for Business, medical terminology for Medical, legal-style passages for Legal, and literature-style passages for Creative Writing.

Live Statistics & Interaction

Show WPM, Raw WPM, CPM, Accuracy, elapsed time, mistake count, current streak, completion percentage, remaining time/words, and a real-time progress indicator. Correct, incorrect, active-cursor, and completed characters should receive clear visual feedback.

Post-Session Analytics

After each session, present WPM, Raw WPM, Accuracy, Consistency, completion percentage, correct/incorrect/extra/missed characters, mistake count, typing rhythm, error heatmap, WPM and accuracy graphs, duration, personal bests, percentile estimate, badges, and a performance summary with strengths, weaknesses, common mistypes, and personalized improvement suggestions.

Persistence & Personalization

Store session history locally so users can compare attempts, monitor improvement, maintain streaks, and track personal records without an account. Include optional sound effects, keyboard shortcuts, pause/resume, restart, theme customization, font-size controls, dark mode, responsive layouts, smooth animations, and accessibility support.

Technical Requirement

The final application should be a single self-contained HTML file using only HTML, CSS, and JavaScript, with no external libraries or frameworks. It should be reactive, responsive, interactive, and visually polished.

Day 38 Deliverable

This PDF documents the Day 38 Typing Speed Studio project specification. The interactive application itself is intended to be delivered as a standalone .html file.
